

MSG 042 - BLUE FD05 MISSION SUMMARY

Good morning to the Blue Team! FD5 has just a few tweaks for Ku coverage. Because of Red MGM troubleshooting we added MGM Deact to Mike right after Handover. Columbia continues to be a good bird.

CM-2 appreciates your efforts setting up for LSP. We have had several great LSP runs on Red shift today and the LSP scientists have gathered some excellent (flaming) data!

Great job on the multitude of MEIDEX ops on FD04. Although clouds obscured any potential dust, the Sprites were spectacular. Dave made history capturing the first Elf image on orbit with a calibrated instrument in the 665 nm filter. SOLSE limb cal was executed successfully while you slept and we're looking forward to analyzing the data on the ground. SOLCON is looking forward to their next solar viewing today, while CVX and LPT continue to operate nominally.

THERE ARE NO FAILURE/IMPACT/WORK AROUNDS FOR TODAY.
